

Vet Partnerships - Case Studies

Dr Izzy Wild MRCVS – International Programme Officer World Horse Welfare

isabellawild@worldhorsewelfare.org

World Horse Welfare partner projects

- Our international work aims to alleviate the suffering of working equids and improve human livelihoods by sharing skills and knowledge with horse owning communities
- Local partner organisations in sixteen countries across Latin America and the Caribbean, Africa and Asia, we currently run 14 projects within equidowning communities

How do the partner organisations work?

Participatory approaches and training activities to engage owners and key stakeholders to promote good animal welfare

- Take ownership of community problems and identify local solutions
- Training on key welfare issues through workshops
- Working in partnership with local services
- Training for local service providers: vets, paravets, farriers, saddlers
- Livelihood strengthening: credit and saving schemes, women's groups, additional income generation
- Advocacy work

Case study – Cambodia Pony Welfare Organization – African Horse Sickness

Feb 2020 – case reported in Thailand

Prevention programme 100km of Sa Kaeo district.

- 1. Educating pony owners about AHS disease and its prevention
- 2. Distributing insecticide laced nets for each pony (net and insecticide purchased separately)
- 3. Distribute insect repellent for each pony
- 4. Establish a reporting line

PROTECT YOUR EQUIDS FROM AFRICAN HORSE SICKNESS

HOW MIDGES SPREAD DISEASE:

Biting infects

the midge

If you suspect an equid is infected with African Horse Sickness (AHS) -HOUSE IT IMMEDIATELY to prevent midges biting and spreading infection.

MIDGES:

- Are active at dawn and dusk, this is mostly when they bite.
 - Travel large distances on the wind

Biting infects

the equid

- Breed in damp soil or pasture
- Thrive in warm, damp environments

YOU MAY NEED TO CONSIDER EUTHANASIA IF YOUR EQUID IS SUFFERING - FOLLOW GOVERNMENT ADVICE.

AFRICAN HORSE SICKNESS

SIGNS TO WATCH FOR IN YOUR HORSE OR PONY

A SERIOUS DISEASE WHICH CAN CAUSE DEATH IN HORSES AND PONIES

African Horse Sickness (AHS) is one of the most deadly equine viruses, with some forms causing death in 90% of infected animals.

If you see any of these signs, house your horse or pony immediately. Make sure that insects cannot bite them and spread infection further.

MOST COMMON SIGNS ARE:

Allow the horse to rest and provide shelter to protect from biting insects.

take a sample and test for this disease.

INTERNATIONAL COALITION FOR WORKING FOUR

Case study – Animal Nepal - Glanders

- Confirmation of presence of disease Glanders in May 2021
- Infectious, life threatening, zoonotic
- Training on Glanders through ICWE, shared experiences from Brooke India and other NGOs
- Videos, posters, brochures
- FAO training on Master of Training for Trainers (MTOT) to senior vets. Practical sessions facilitated by Animal Nepal on glanders information, equine handling, TPR, PPE

Case study – Animal Nepal - Glanders

FAO signed a MOU with Animal Nepal to conduct a study on three areas:

- 1. To understand and update the national distribution of equine population
- 2. To assess the risk associated with the transmission of Glanders at animal-human interface in Nepal
- 3. To assess the financial and economic impact in the country due to Glanders.

As a result, the government of Nepal will develop different policies for glanders in Nepal, based on the results of the study by the FAO.

Case study – Costa Rica Equine Welfare

- CREW and SENASA partnership in Chirripo region since 2015
- CREW are able to provide support and resources
- Assistance with welfare inspection, training
- Legalities, work permits, inspections, government backing
- Mutual benefits, synergy

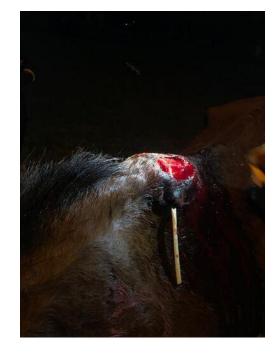

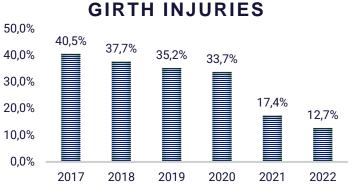

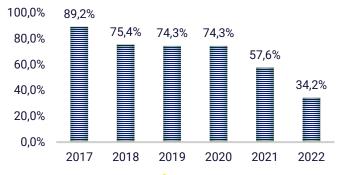

Case study – Costa Rica Equine Welfare

SADDLE INJURIES

Inank you for listening
