

Wildlife management during fires

Rodney Vile, Principal Officer Wildlife Emergencies
Department of Energy, Environment and Climate Action, Victoria, Australia

Energy,
Environment
and Climate Action

Defining Emergencies

Defined under the *Emergency Management Act 1986*, *Emergency Management Act 2013* and the *State Emergency Management Plan*.

State Emergency Management Plan (Plan) defines:

- Governance of emergencies, including
 - State Emergency Management Priorities,
 - emergency levels,
 - operational structures and
 - coordination procedures.
- What is an emergency
- the phases of emergency management (Mitigation, Planning, Preparedness, Response, and Recovery).
- the key roles and responsibilities of organisations (eg: Lead Agency)

Defining Wildlife Emergencies

The **SEMP** defines the following as wildlife emergencies:

- Cetacean (whale and dolphin) entanglements, strandings and vessel strike
 - Wildlife affected by marine or freshwater pollution.
 - Wildlife welfare arising from an emergency event (includes bushfire, flood, heat stress)
-
- **DEECA is defined as the lead agency for these as well as a range of fire, energy, water and biosecurity emergencies**
 - **Also defined as lead support and recovery agency for responding to impacts on threatened ecosystems and species**

Wildlife Emergencies - Strategic Approach

1. Identification of principles that guide response, regardless of emergency type, species, and interventions
2. Approach based on three core principles:
 - to protect human safety,
 - minimise harm and suffering to wildlife and
 - ensure that animals are treated humanely.
3. Assessment of individual animals
 - Focused on the 5 domains of animal welfare:
 - Nutrition,
 - Environment,
 - Health,
 - Behaviour and
 - Mental State.

✗ not about “rescue” or “saving”

Individual Plans for Wildlife Emergencies

Each emergency type requires its own response plan.

Response Plans define:

- Scope and scales of response – what is in and what is out
- response structure within the EM arrangements
- The roles, skills and training that is required
- Triggers for deployment
- Intervention activities, procedures, guides and criteria
- PPE and response equipment
- Response partners

Example - Wildlife and Fire

Response Plan:

- Victorian Response plan for Wildlife Impacted by Fire

Triggers:

- Wildlife welfare arising from any fire within Victoria

Scope:

- Human safety
- Wildlife welfare on and adjacent to fire ground

Response activities:

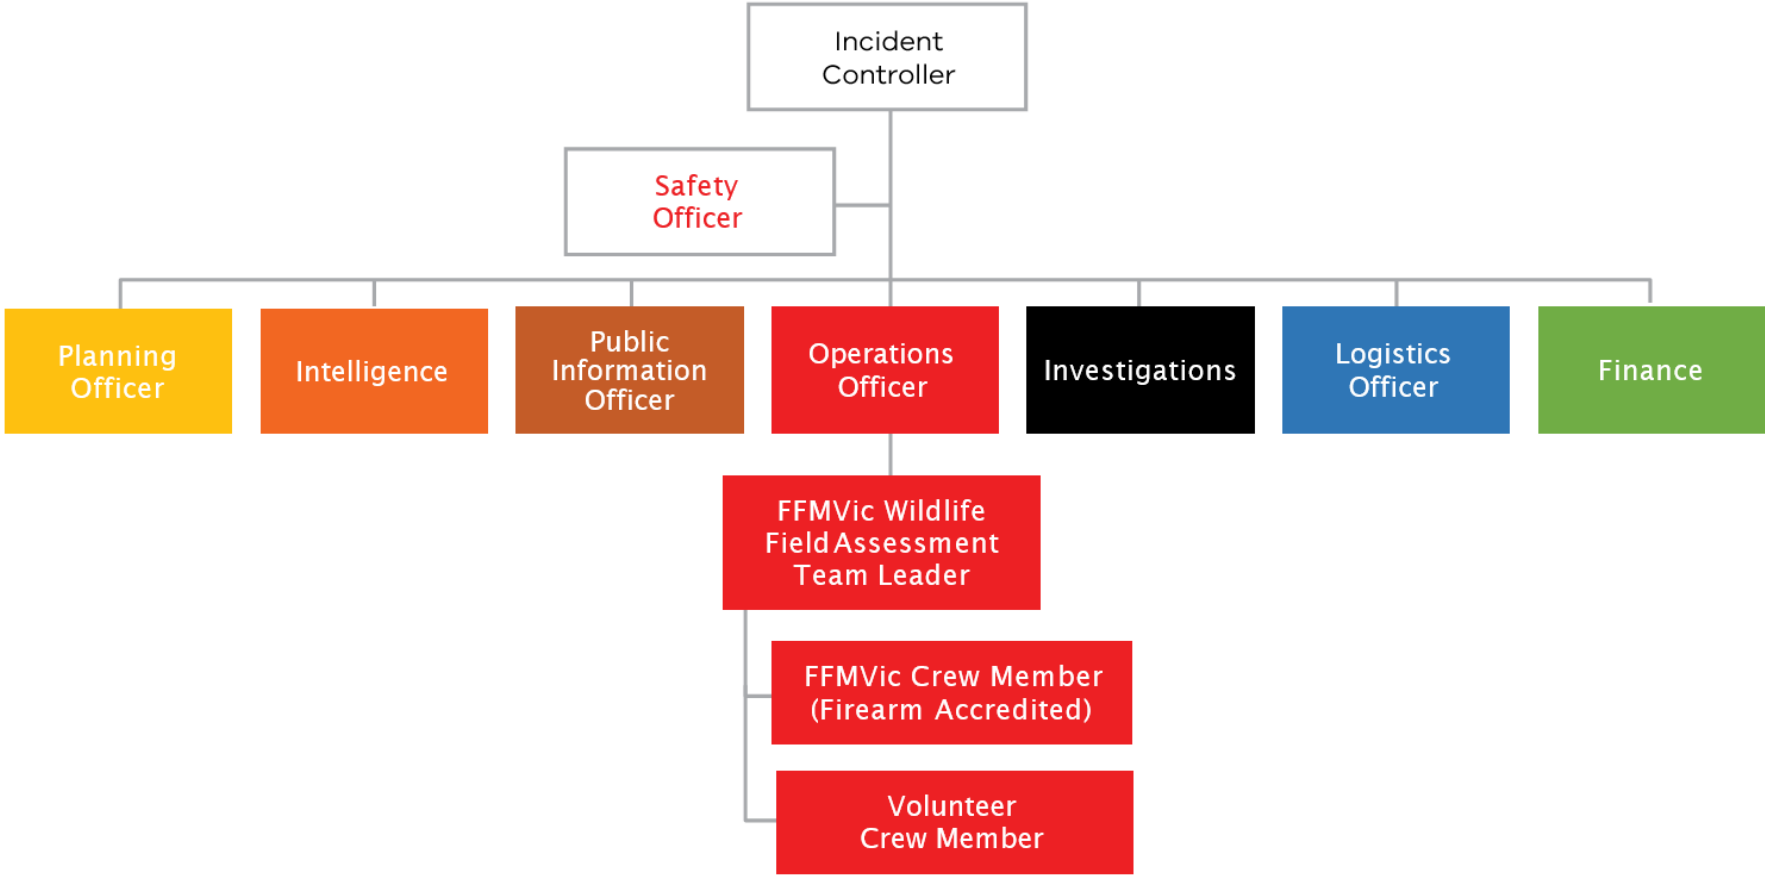

- Fire ground:
 - Field assessment of wildlife
 - Monitoring, Euthanasia, Capture and transport to wildlife triage
- Wildlife triage:
 - Veterinary assessment of wildlife in a dedicated triage facility
 - Transfer of wildlife to rehabilitation or release

Partners:

- Wildlife Emergency Support Network
- Wildlife Rehabilitators

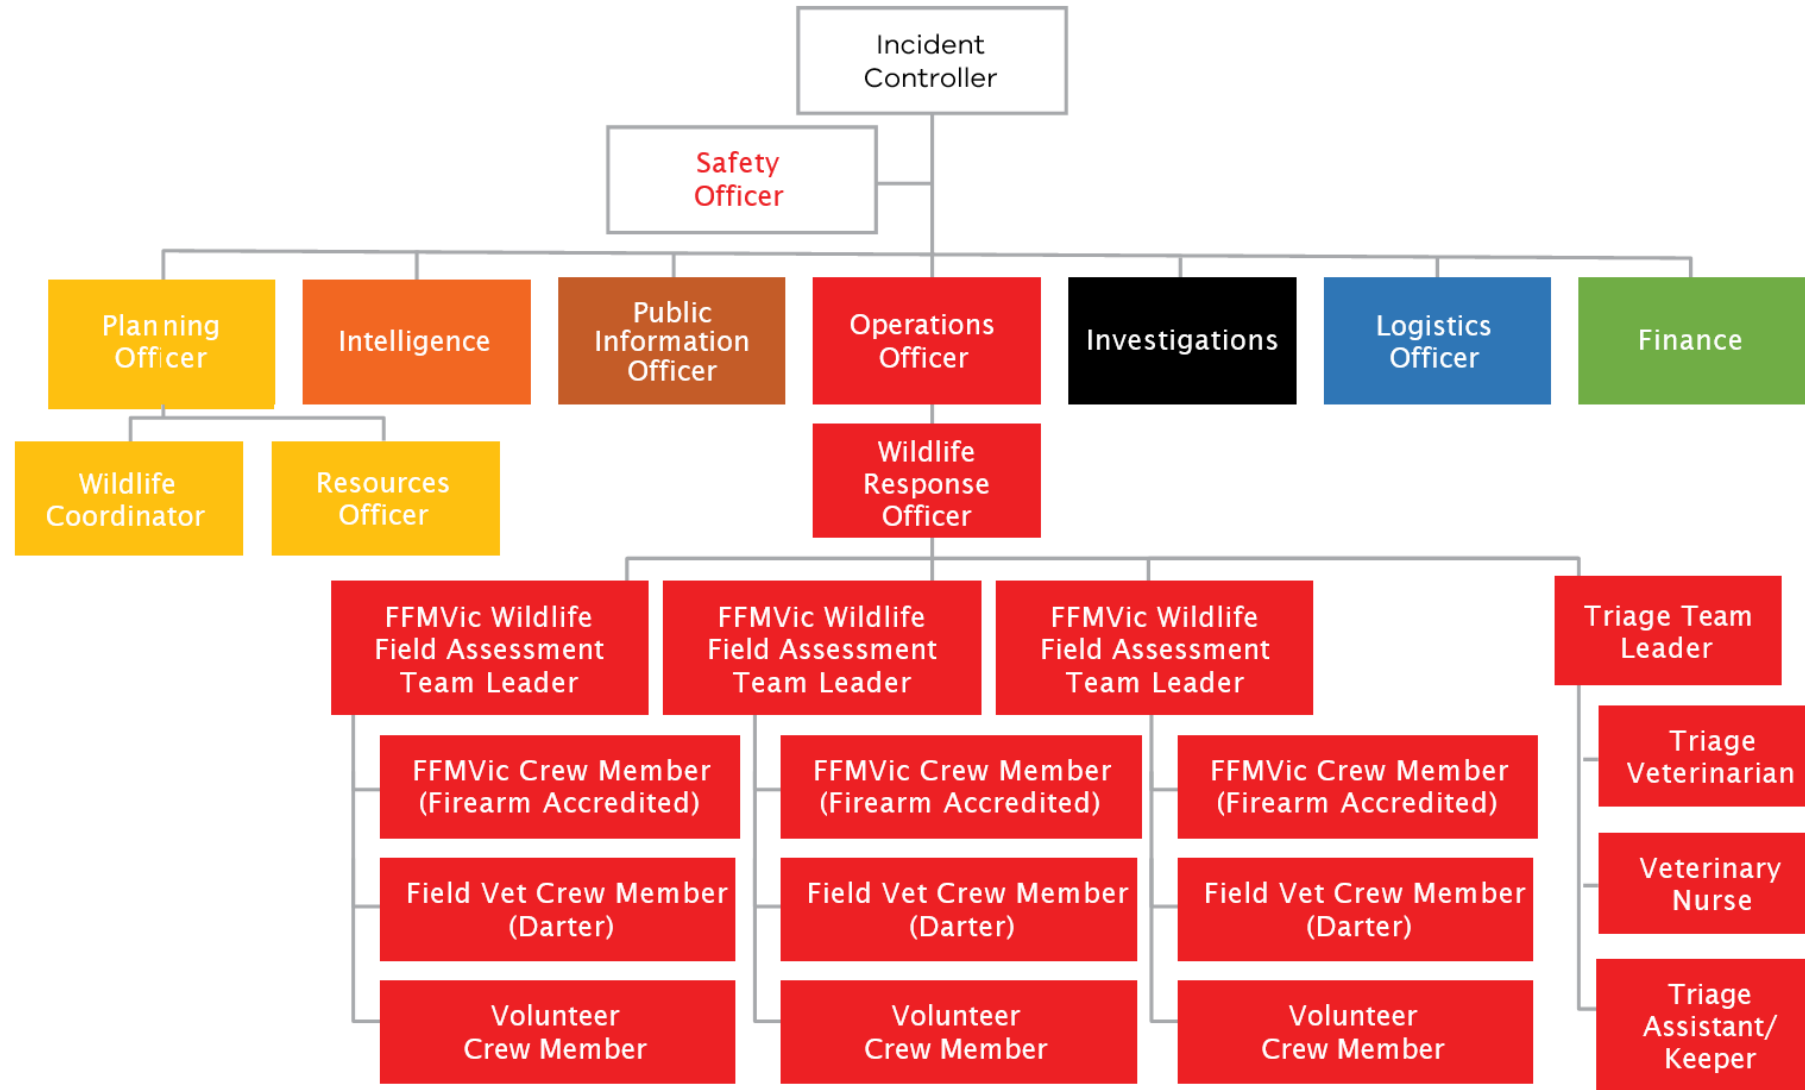

Wildlife Teams Structure – Level 1

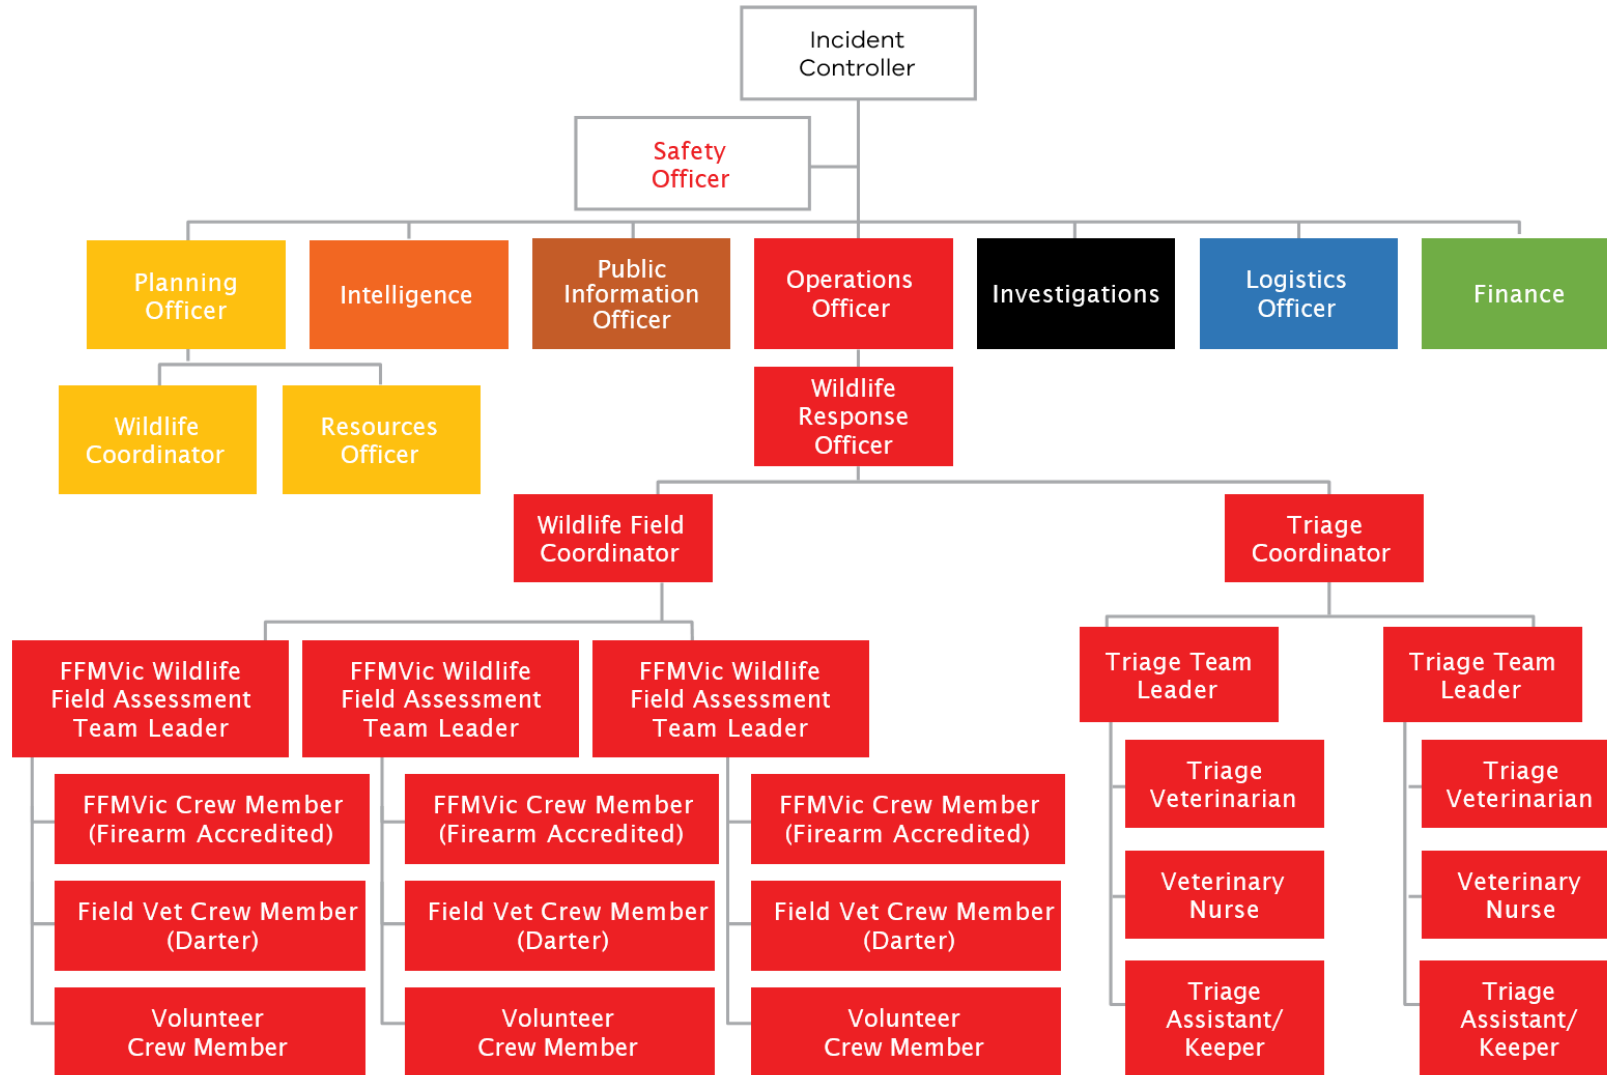

Structure (focus on Operations) for level 1 incident

Wildlife Teams Structure – Level 2

Structure (focus on Operations) for level 2 incident

Wildlife Teams Structure – Level 3

Structure (focus on Operations) for level 3 incident

Wildlife and Fire - Field Assessment

Team structure

- 2-5 people
- Firearm, dart gun, capture equipment

Actions

- Search on and near fireground in targeted areas – roads, waterways, unburnt areas
- Observe and monitor wildlife
- Record observations

Options

- Leave the wildlife in place
- Leave the wildlife in place and monitor
- Euthanise in field
- Capture and transport to the triage unit

Wildlife and Fire – Triage Teams

Team structure:

- Team leader, veterinarian, vet nurse, keeper/assistant

Actions

- undertake veterinary assessment of captured wildlife
- determine treatment including euthanasia

Options

- provided short term supportive care prior to release
- released immediately
- transferred to Zoos Victoria for specialised veterinary care
- transferred to registered rehabilitator for further care, prior to release

✘ Does not perform as a hospital

2019/20 Fire Season

Between November 2019 and February 2020:

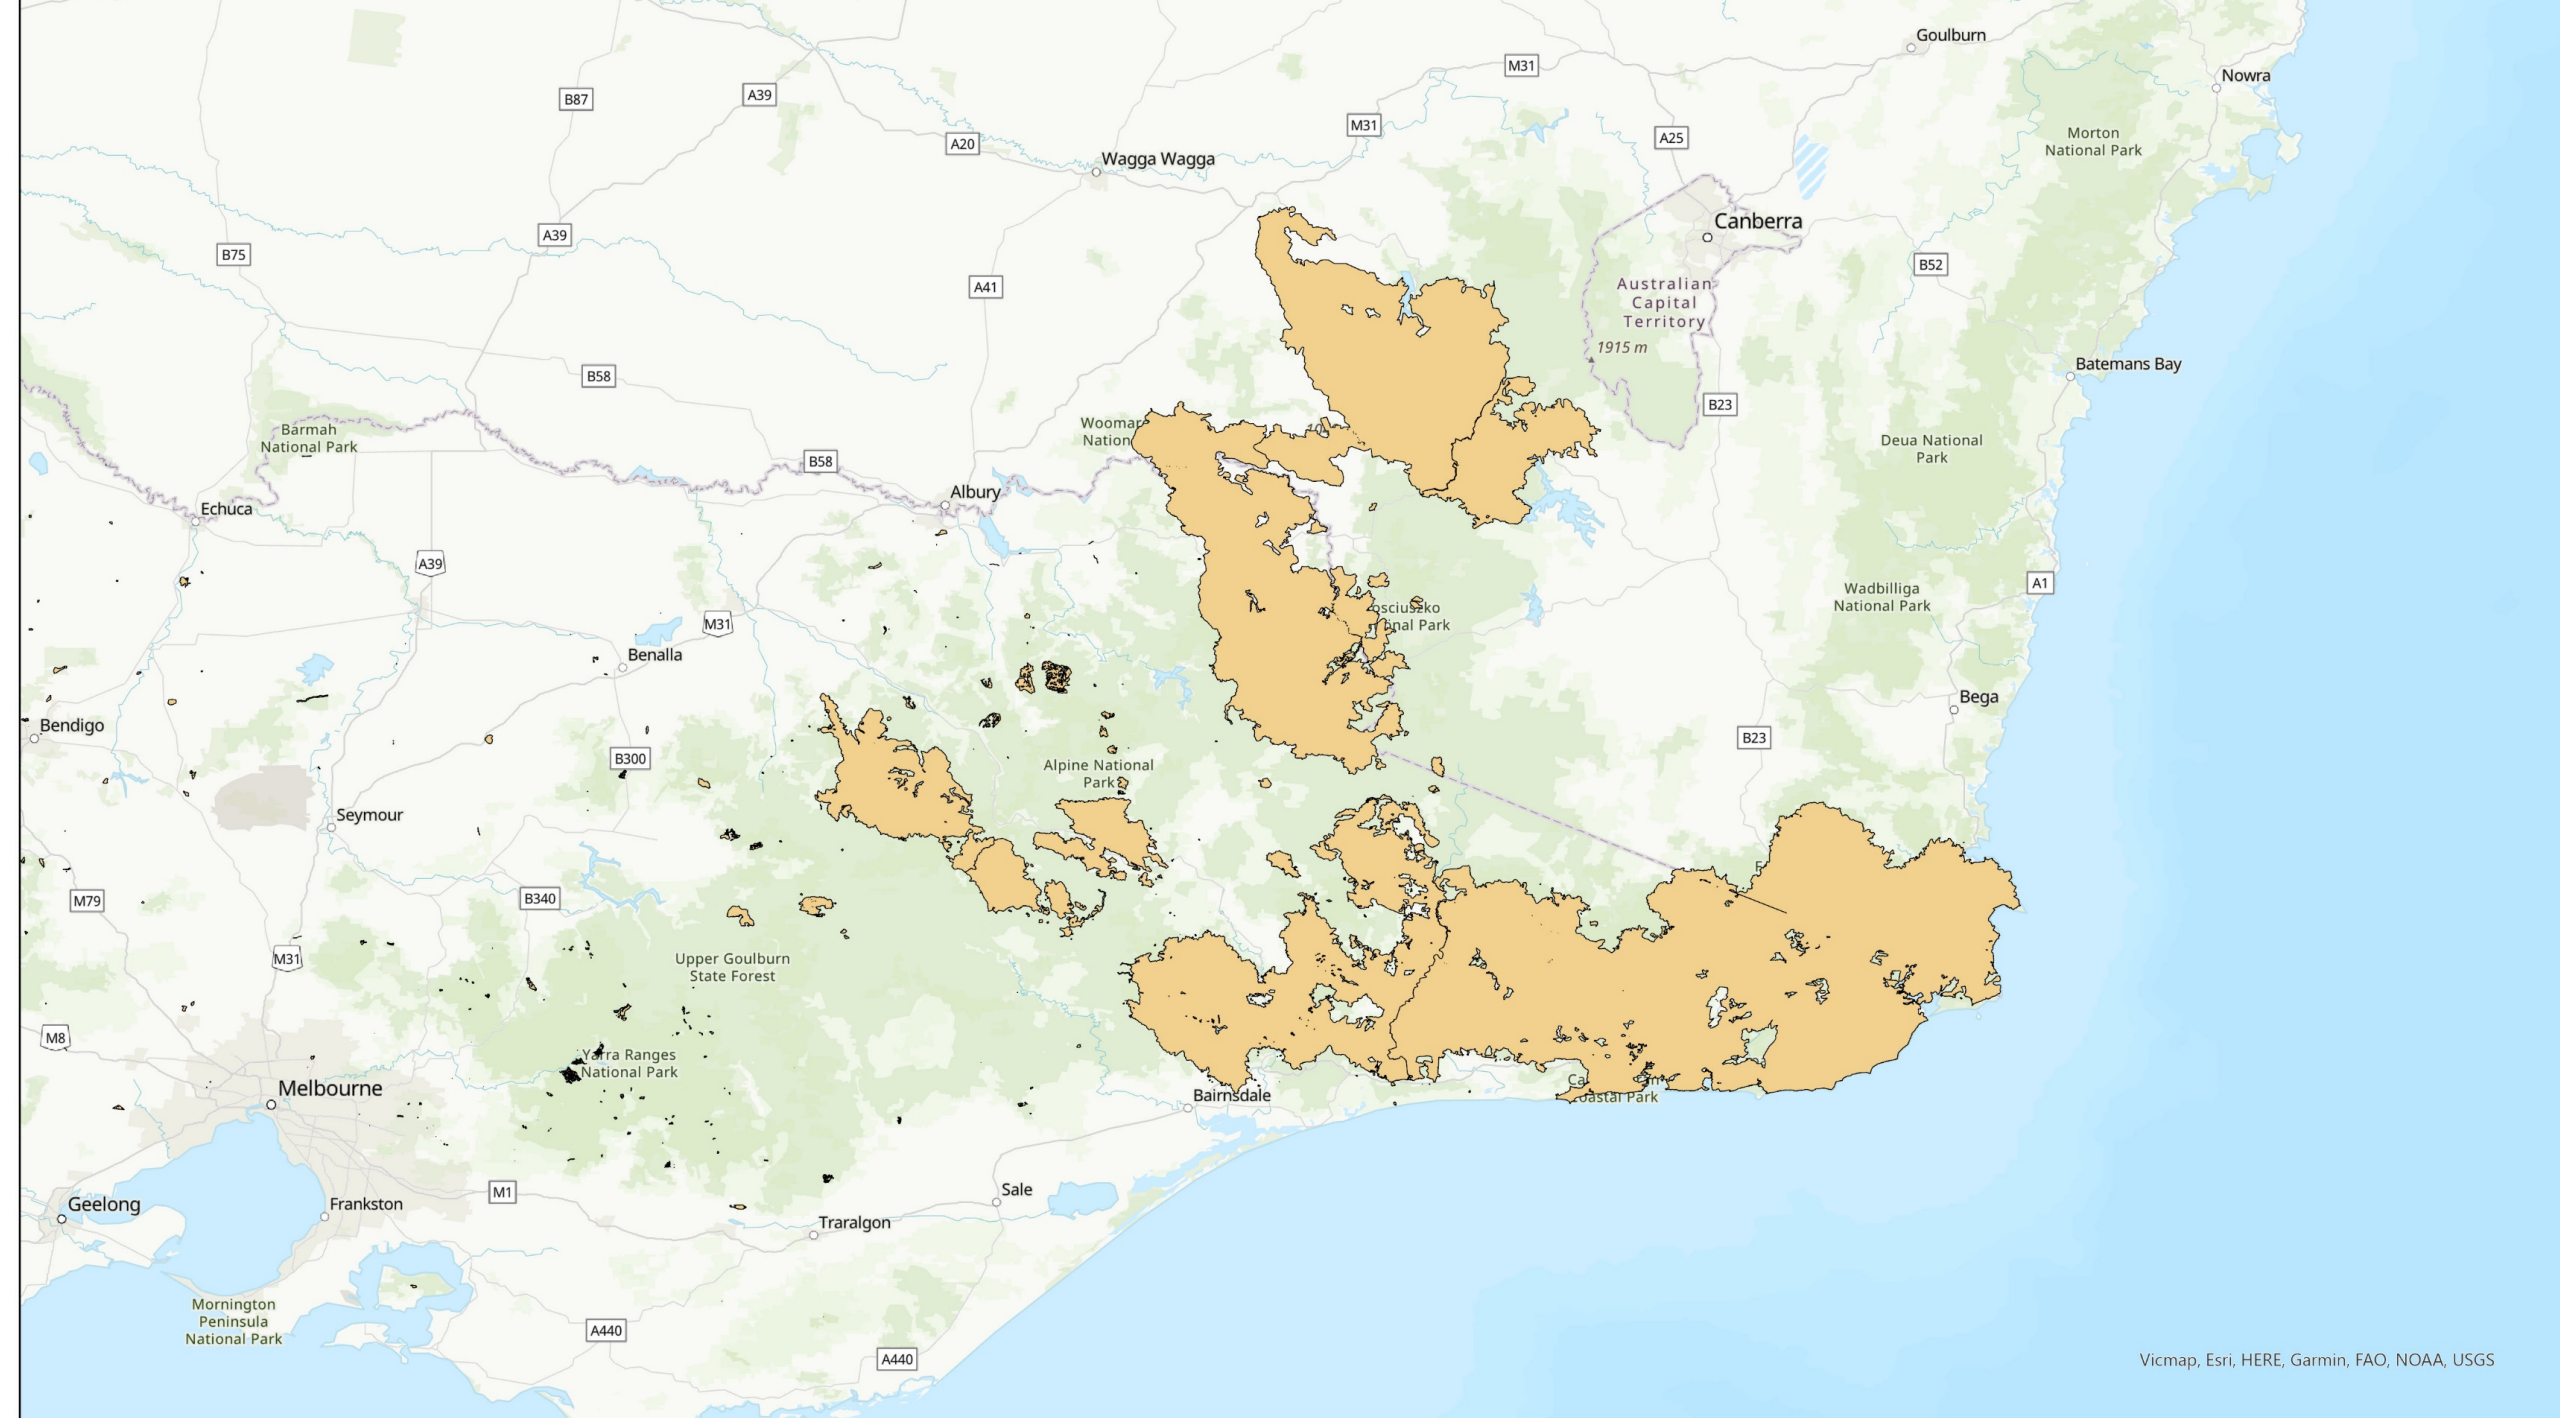

- 1.5 million+ hectares of land burnt – (1.35 million ha was public land)
- Five people died
- 548 homes destroyed or damaged, impacts to farms, commercial properties, community infrastructure, cultural heritage sites and environmental assets.
- ~ 242 species, 20 fauna and 222 flora, had half (or more) of their habitat destroyed by the fires.
- ~ 80 per cent of remaining Warm Temperate Rainforest in Victoria
- 80+ per cent of Gallery Rainforest and Banksia woodland was burnt.

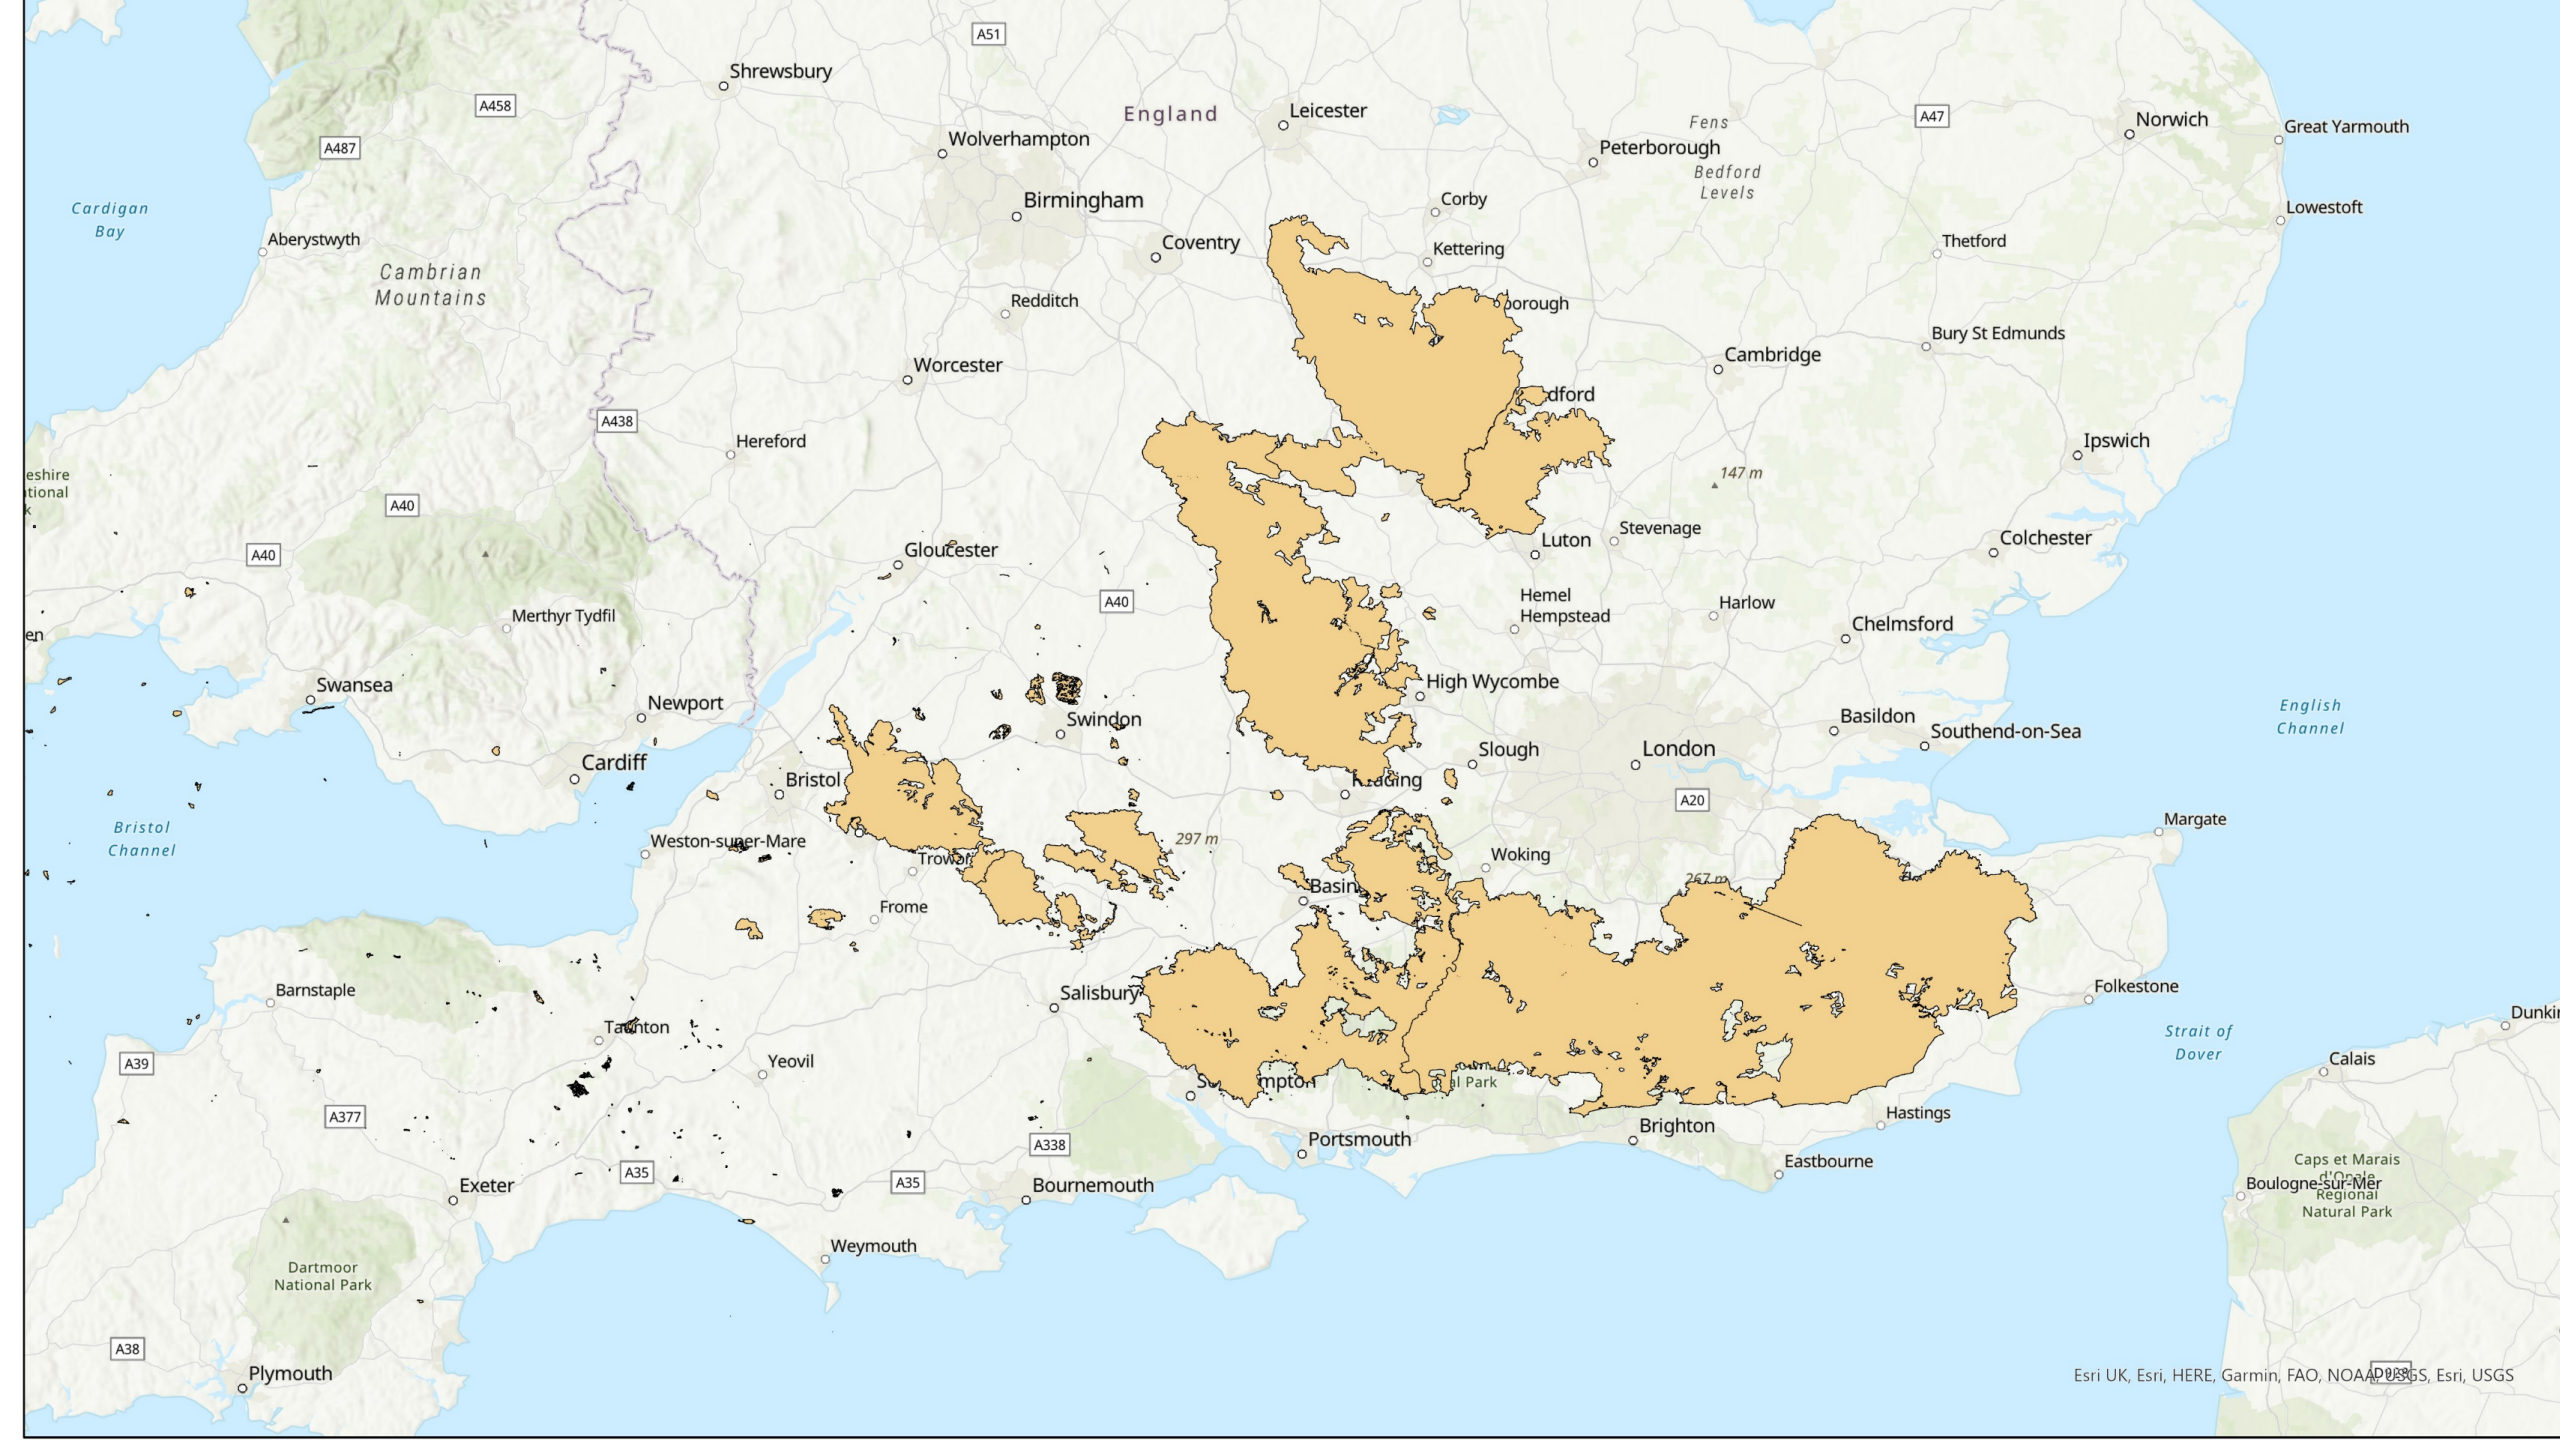

2019/20 Fire Footprint

The have been mapped. The next three maps show the 2019/20 season fire footprint:

- As it occurred in Victoria
- Overlaid to scale on maps of:
 - England
 - Balkans region.

Wildlife - What Happened?

Field based response:

- >70 areas inspected across the fire footprint
- 7 weeks of field assessments
- Aerial reconnaissance
- > 2,000 animals assessed
- 16% euthanised in field
- Majority of country could not be accessed

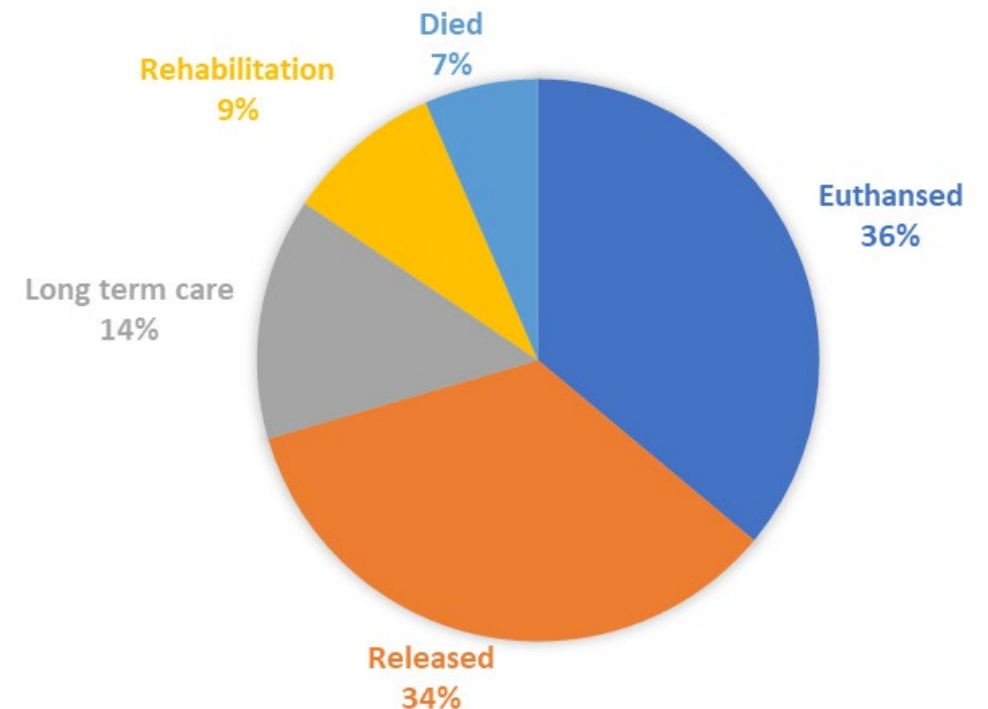

Animal Type	Number Assessed	Number Euthanised	Number to Triage
Amphibian	1	0	0
Bat	1	1	1
Bird	18	2	3
Echidna	6		
Emu	7	1	
Kangaroo	158	6	
Koala	288	12	127
Pest Species	11	8	
Platypus	1	0	0
Possums and gliders	2	1	1
Reptiles	21	1	3
Wallaby	84	2	
Wombat	10		
Grand Total	608	34	135

*Data from Bairnsdale IMT field teams

Triage Units - What Happened?

Triage units:

- 4 units open
- Operated over 7 week period
- Some opened and closed according to need
- Approx 300 animals assessed
- One reopened to respond to a koala health issue
- Wildlife taken to triage:
 - Koalas
 - Birds
 - Small mammals

*Data from Mallacoota Triage Unit

What Did We Learn From These Fires?

- **Clear purpose and objective**
 - What do we do and where
 - Be clear on scope
- **Get into fire incident management team early**
 - Deploy a wildlife coordinator to advocate into the IMT
 - Ensure IMT deploys comms messages
- **Standards**
 - Decision making tools for field and triage teams
 - Training
- **External Communication**
 - Lower community impacts – but high community expectations
 - Can people help or not? (community, interstate/international welfare groups, donations)
 - Stakeholder engagement is critical - use different avenues including 1 on 1 briefings with welfare groups.
- **Data management**
- Have good, timely data systems and management

Response Plan Development

1. Define legal authority
2. What are the principles for wildlife /animal response
3. Is a specific plan needed (per emergency type/species/animal class)
4. Determine:
 - **Scope** – what is the body of work, legal authority
 - **Who** – partners, volunteers, structures, how do you work with other emergency agencies
 - **Where** –what is the operating environment, where are we located
 - **What** – Assessments, Intervention and treatment, Extraction? Translocation?
 - **How** – training, people, structures, deployment protocols
 - **Record** – forms, data management, assessment frameworks
 - **Engagement** – internal, external, stakeholders, partners, other emergency response agencies
 - **End point** – when do you finish? After Action Reviews, Continuous improvement
