ADIS 🔗 WAHIS

EU single entry point for disease notifications

DG SANTE

European Commission

ADIS and WAHIS are now linked !

- They were linked for reference tables since 2021

- **Since 11 September 2024, ADIS and WAHIS are also linked for disease notifications –** ADIS is single entry point for both ADIS and WAHIS **disease notifications**

- Work in progress … let's see where we are

European Commission

Outline

- Background on ADIS

- Where are we today ?

- Next Steps

- Final Considerations

European Commission

Background on ADIS

European Commission
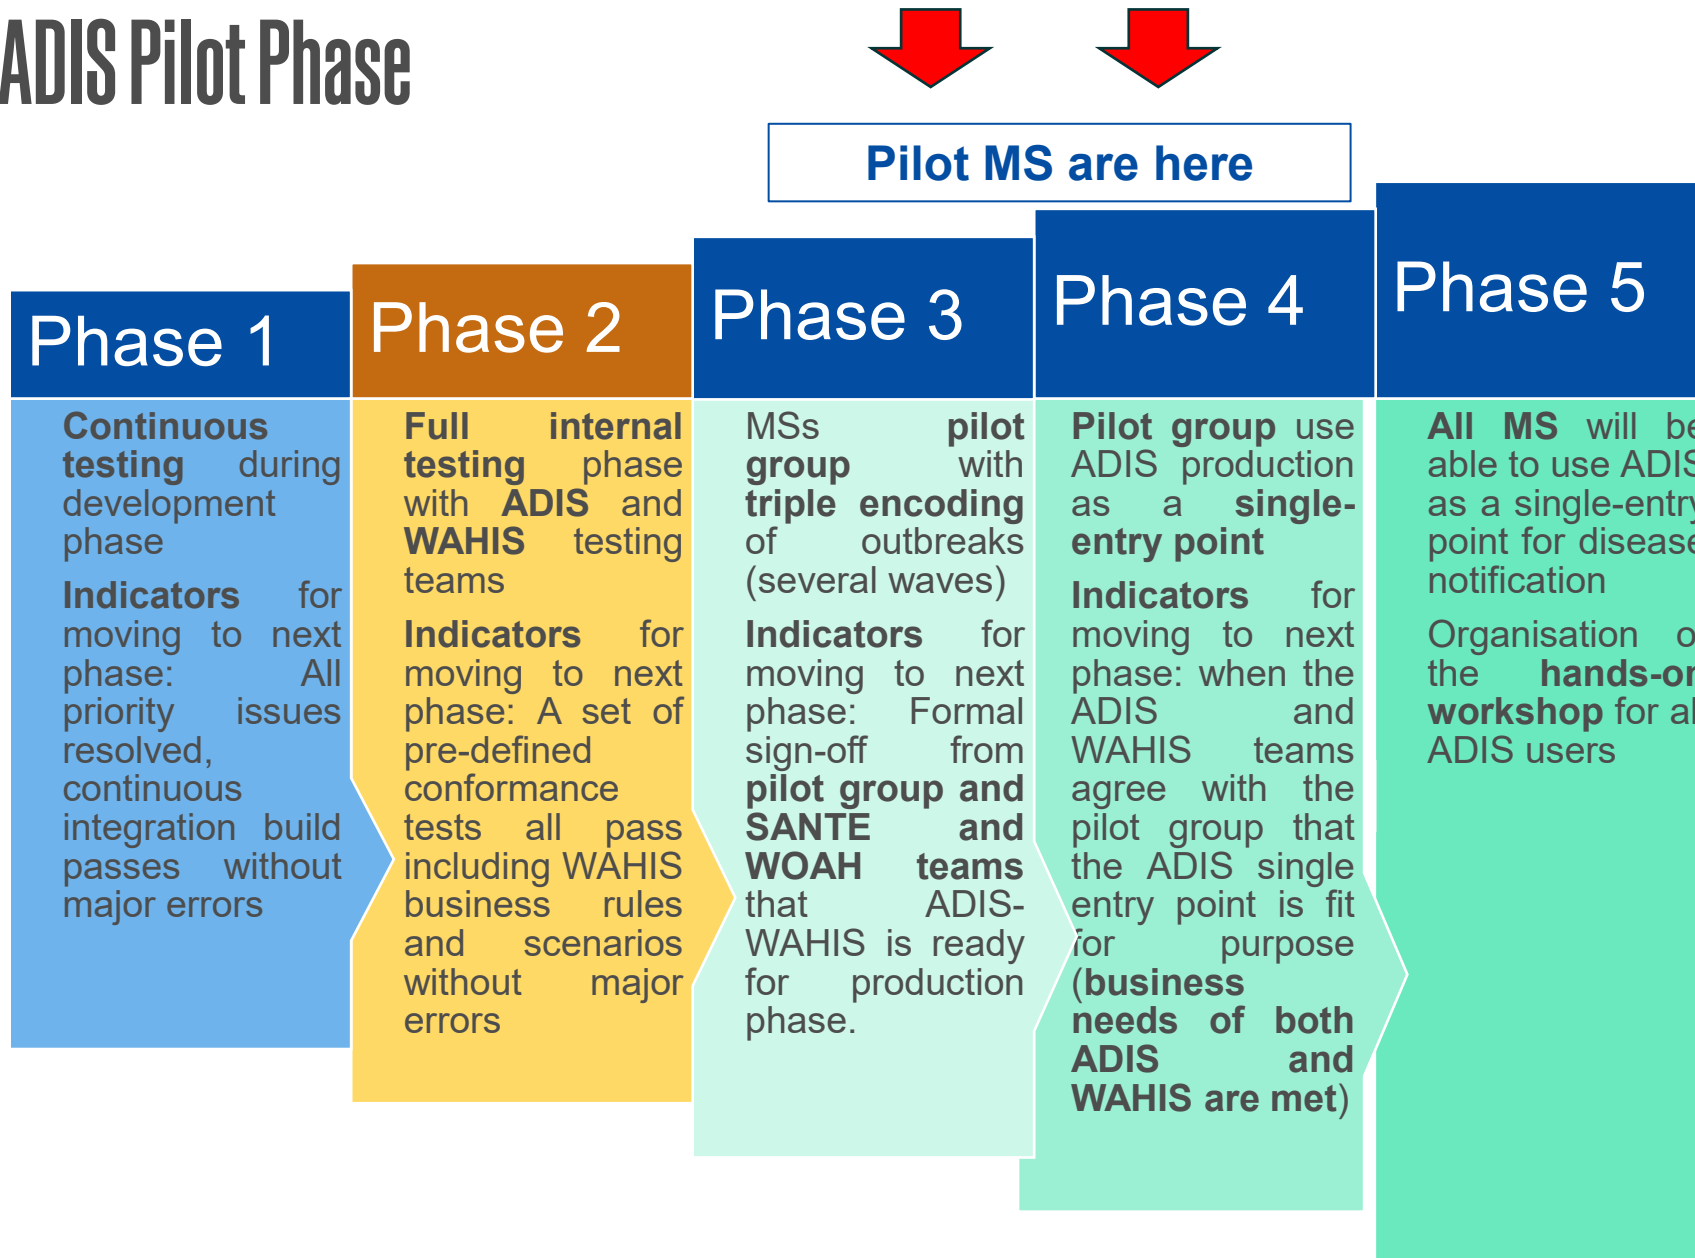

How we got there?

Multi factor approach:

- **political willingness**:

    - Support by Member States

    - common goal between SANTE and WOAH

- Securing **EU funds** to make the necessary work on both ends

- Adoption of **Animal Health Law** made the finalisation of the project possible by further aligning the EU legislation to WOAH standards

WHY linking ADIS and WAHIS ?

Important to link systems for 2 reasons:

- Reduce risks in data gaps and discrepancies → **increases credibility of EU transparency in animal health**

- **Optimisation of resources** in national Competent Authority by avoiding double data entry

ADIS Pilot Phase

Pilot MS are here

Phase 1

Continuous testing during development phase

Indicators for moving to next phase: All priority issues resolved, continuous integration build passes without major errors

Phase 2

Full internal testing phase with **ADIS** and **WAHIS** testing teams

Indicators for moving to next phase: A set of pre-defined conformance tests all pass including WAHIS business rules and scenarios without major errors

Phase 3

MSs **pilot group** with **triple encoding** of outbreaks (several waves)

Indicators for moving to next phase: Formal sign-off from **pilot group and SANTE and WOAH teams** that ADIS-WAHIS is ready for production phase.

Phase 4

Pilot group use ADIS production as a **single-entry point**

Indicators for moving to next phase: when the ADIS and WAHIS teams agree with the pilot group that the ADIS single entry point is fit for purpose (**business needs of both ADIS and WAHIS are met**)

Phase 5

All MS will be able to use ADIS as a single-entry point for disease notification

Organisation of the **hands-on workshop** for all ADIS users

MS in the pilot group:
- DE
- DK
- ES
- LV
- NL

European Commission

Where are we today ?

ADIS Pilot Phase

- Commitment by Pilot Member States:

  - ***Thank you*** *to Denmark, Germany, Latvia, the Netherlands and Spain*

- Coordination with Pilot Member States: ad hoc training, feedback sessions and 3 test waves

- Today we have **Denmark, Latvia, the Netherlands and Spain** who already **enter both EU and WOAH notifications via ADIS**!

- Germany will migrate in November 2024

ADIS Pilot Phase - 1ˢᵗ outbreak

- 1ˢᵗ **outbreak** entered by Latvia (11/9/24) after the migration to ADIS as single entry point was an outbreak of ASF in wild boar

- As intended, the outbreak was not sent to WAHIS (not needed as for Latvia this is reported in the WAHIS six monthly reports)

- This notification was made on AHL notification needs

ADIS Pilot Phase - 1ˢᵗ event

- 1ˢᵗ **event** entered into ADIS was entered by Denmark (18/9/24) after the migration

- The event report was sent to WAHIS and validated by WOAH

Next Steps

European Commission

3 steps MS need to do to interconnect

- All Member States will be able to use ADIS as a single entry point for EU and WOAH notification requirements, but first they need to:

    1. Appoint the same users for WAHIS and ADIS notifications

    2. Indicate which diseases they intend to report in the six-monthly report of WAHIS so that WAHIS applies a filter for these notifications

    3. Liaise with WAHIS team to close ongoing events in WAHIS

- More details will follow in Dr Melens presentation

European Commission

Who can use ADIS as single entry point?

- All **Member States**

- **Non-EU countries** that already use ADIS, can on voluntary basis also initiate the process to use ADIS as single entry point for disease notification

- We recommend non-EU countries to also benefit from the advantages

- Some technical conditions need to be met (e.g. shape files in ADIS and WAHIS need to match)

European Commission

To pencil in your agendas

WAHIS Disease notification focal points and ADIS Key Users invited to:

- Online meeting organised by SANTE and WOAH on the **next steps of the interconnection** (15 October 2024 in the morning)

- Online meeting organised by SANTE and WOAH on the **preparation** for the WOAH WAHIS + ADIS **training** (mid November, TBC)

- Face to face WAHIS+ADIS training organised by WOAH in Paris 25-29 November (invitations were already sent)

    Do an internal check to decide if you want to join the next group of countries that will migrate

Final Considerations

European
Commission

New ADIS has a learning curve

- While ADIS will assist in making the right choices when notifying, it is important to check the right boxes as this will have consequences on the information which will stay in ADIS or go to WAHIS as well

- Several users are not familiar with both EU and WOAH environments

- Each Competent Authority needs to assess how to reorganise its notification team

- Training in November in Paris will help smooth the transition

- Reach out to the **ADIS-WAHIS Kiosk** just out of the meeting room

- **Thank you** to **Member States** and **WOAH** for making this possible

European Commission

Thank you

European Commission
