

Veterinary Office of Bosnia and Herzegovina

Legislation framework in veterinary sector in Bosnia and Herzegovina prescribes control of zoonoses:

- Brucellosis
- Campylobacteriosis
- Listeriosis
- Salmonellosis
- Trichinellosis
- Echinococcosis
- Tuberculosis
- E.coli
- Rabies
- Q fever
- Anthrax
- Other zoonoses in accordance with epidemiological situation

- Cooperation with human sector is mostly incorporated in implementation programmes including mutual reporting of zoonoses
- Programs for control of zoonoses are either annual or multiannual depending on risk assessment

Vaccination strategies:

In Bosnia and Herzegovina vaccination of animals for zoonoses is currently obligatory for rabies (dogs), brucellosis (sheep and goats), anthrax (all susceptible animals in districts) and salmonellosis (laying hens)

EU funded Twinning project « EU support to capacity building and gradual Union acquis alignment in the veterinary sector of Bosnia and Herzegovina »

Brucellosis control and eradication programme:
Multi-annual programme for small ruminants
2022- 2026

February 2022

Awareness programs and trainings

- Awareness programs and trainings were continuously conducted for different stakeholders (veterinary, human health, hunting, general public...). Several zoonoses during latest years were taken as priority for these activities (rabies, brucellosis, HPAI, salmonellosis) including AMR control.
- Beside competent authorities some activities were supported by EU (Twinning project), WOA, FAO and other organisations.

BJESNILO

Bjesnilo je smrtonosna bolest uzrokovana virusom koji napada nervni sistem. Virus se luči iz sluznice životinje i prenosi se na ljude ili druge životinje ugrizom ili ogrebotinom oboljele životinje. Pojave znakova bjesnila, bolest je skoro uvijek smrtonosna.

Vakcinišite Vaše životinje protiv bjesnila i zaštitite svoju porodicu.
